Mr. Douglas R. Sherwood Acting Hanford Project Manager U.S. Environmental Protection Agency 712 Swift Boulevard, Suite 5 Richland, Washington 99352

Mr. Roger F. Stanley, Director Tri-Party Agreement Implementation State of Washington Department of Ecology P.O. Box 47600 Olympia, Washington 98504-7600

Dear Messrs. Sherwood and Stanley:

SUBMITTAL OF THE LIMITED FIELD INVESTIGATION (LFI) REPORT FOR THE 100-HR-1 OPERABLE UNIT (OU), DRAFT A (DOE/RL-93-51) AND THE QUALITATIVE RISK ASSESSMENT (QRA) FOR THE 100-HR-1 SOURCE OPERABLE UNIT (WHC-SD-EN-RA-004, REV. 0)

Enclosed please find the subject LFI Report (enclosure 1) and QRA (enclosure 2) submitted by the U.S. Department of Energy, Richland Operations Office (RL), to the State of Washington Department of Ecology (Ecology) and the U.S. Environmental Protection Agency (EPA) for review. Submittal of the 100-HR-I OU LFI Report completes Hanford Federal Facility Agreement and Consent Order (Tri-Party Agreement) Interim Milestone M-I5-05A which requires RL to submit the 100-HR-I OU LFI Report to Ecology and EPA by August 9, 1993. The 100-HR-I OU QRA is provided to facilitate review of the LFI Report. As an LFI Report is roughly analogous to a Phase I Remedial Investigation Report, defined in Table 9-2 of the Tri-Party Agreement Action Plan as a secondary document, RL requests Ecology comments (as the lead regulatory agency for 100-HR-I) by September 24, 1993.

RL, EPA, and Ecology agreed to the unique concepts of LFIs and QRAs when adopting the Hanford Site Past-Practice Strategy (HSPPS) for use in September 1991 to create a bias for action. An LFI is an effort to collect limited additional site data which are sufficient to support a decision on conducting expedited response actions or interim remedial measures (IRMs). A QRA is a characterization of risk to human health and the environment associated with waste site contamination not based solely on quantification using existing and available site data. Preparation of an OU specific QRA is a task incorporated in the corresponding OU specific LFI Report. Since September 1991, RL, EPA, and Ecology have worked together on a daily basis to implement HSPPS and conduct LFIs at Hanford.

The purpose of the 100-HR-1 OU LFI Report is for RL to recommend whether 13 100-HR-1 OU high priority past-practice waste sites, as identified and agreed by RL, Ecology, and EPA, continue to be candidates for an IRM since completion of the 100-HR-1 OU LFI. This LFI Report, one of the first of its kind, is a

compilation and analysis of data relevant to the high-priority waste sites in the 100-HR-1 OU as identified in the 100-HR-1 OU Resource Conservation and Recovery Act Facility Investigation/Corrective Measures Study Work Plan (approved by Ecology on November 3, 1992). With this data, and a summary of the associated 100-HR-1 OU QRA, the LFI Report provides a basis for making a defensible recommendation for maintaining IRM candidacy on a waste site by waste site basis.

The nine waste sites in the 100-HR-1 OU recommended by RL for continued IRM candidacy will be included in a focused feasibility study for detailed analysis of remedial alternatives scheduled for submittal by RL to Ecology and EPA by September 1994. Action at three waste sites not recommended for continued IRM candidacy will be deferred to a final remedy selection phase scheduled for completion by September 2018. More information is required to make a recommendation for one remaining site, therefore RL suggests an additional LFI be conducted at the site.

Please address any comments or questions regarding this correspondence or Hanford Site 100 Area past-practice environmental investigations to Mr. Eric Goller on (509) 376-7326.

Sincerely,

teven H. Wisness

Hanford Project Manager
